

Solenoid Valves Upgrade MAC Replacement on Baldwin™ Pulse Spray Dampening System

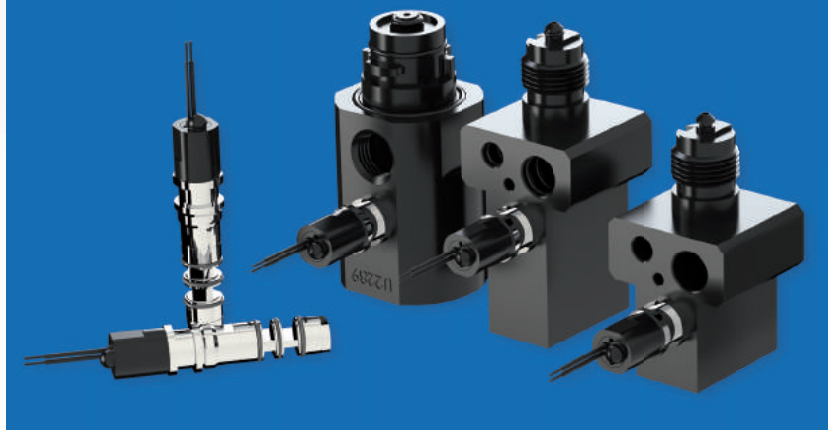

APPLICATION DESCRIPTION

Spray dampening is a common technology used in newspaper printing presses to apply ink release solutions to the non-printing surface of ink rollers. Precise solution dosing controls dot gain and permits high resolution. Current spray dampening valve technology used in spray bars is expensive to replace and time consuming to maintain. Valve failures are common and poor valve performance leads to a degradation in print quality and expensive web breaks.

COST SAVINGS

Savings realized in increased production, reduced labor cost and fewer replacement parts.

CUSTOMER REQUIREMENTS

- ✓ Similar flow from valve to valve ensuring consistent spray volumes
- ✓ Stable flow throughout the life of the valve
- ✓ Longer life
- ✓ Easy maintenance

CUSTOMER BENEFITS

- ✓ Drop-in replacement compatible with existing spray dampening systems
- ✓ Replacement of water and water+air systems
- ✓ Easy valve replacement No manifold removal needed
- ✓ Liquid Bullet Valve® tested over billions of cycles
- ✓ Consistent and repeatable response times over the lifetime of the valve

MAC Valves - Highly engineered solutions for the highest performing applications since 1948
